SUMMARY

Software Developer with 10+ years of experience in software development, seeking full-time developer roles.

I have experience with multiple programming languages from C++ to JavaScript but for the last 5 years I've been mainly working on web applications. I enjoy working in both backend and frontend and I pride myself in creating usable and visually pleasing user interfaces.

I'm known as a good communicator and in my current role I often participate in sales meetings and interview candidates for developer roles.

I love learning new things and I'm constantly pushing myself to expand my knowledge and skills.

EDUCATION

Bachelor of Engineering in Electrical and Automation Engineering 2017 - 2022
Centria University of Applied Sciences

Thesis subject: Learning environment for Beckhoff automation devices

Bachelor of Engineering in Media Technology 2005 - 2010
Central Ostrobothnia University of Applied Sciences

Thesis subject: Programming library for multitouch software development

SKILLS

Programming languages	Python, JavaScript, TypeScript, HTML/CSS
Libraries & frameworks	Django, React, Next.js, Node.js, TailwindCSS, Material UI, Styled Components
Databases	PostgreSQL, SQLite, Redis, MongoDB
Cloud	Azure, AWS (S3)
CI/CD	Gitlab, Github Actions, Docker, Kubernetes
Tools	VS Code, Git, vim

EXPERIENCE

Senior Developer & Team Lead Oct 2018 - Present
Codemen Oy

- Main developer on a custom ERP project for a client using Python, Django, TypeScript and React. Responsible for all aspects of the project from database design to frontend development, CI/CD setup using Github Actions and setting up services in Azure.
- Main developer on a Node.js project developing a media backup and transfer tool used to transfer large media projects (100GB+, 10000+ files) into customers SaaS solution. The solution was developed using TypeScript, Node.js and Redis.
- Lead the development of a media press portal with a team of 3 developers. The application was developed using Next.js, React and Redis. Worked closely with the client to ensure the results were up to their standards.
- Developed a Electron and React based Windows application used to speed up COVID-19 vaccinations in multiple cities in Finland. The application significantly reduced the time needed for data entry during the vaccination. The data was sent securely to a backend which further processed it and entered it into the hospital systems.

- As the Team Lead of a 3-5 person consulting team I made sure my teammates had everything they needed to succeed in their roles and helped them grow and advance in their careers.

Technologies used: Python, Django, JavaScript, TypeScript, React, PostgreSQL, Redis, Azure,

Development Engineer

Jan 2011 - Sep 2018

Centria Research and Development

- Worked on a in house IoT platform used for data collection from different sensors and data sources. Development included designing and implementing a Python+Flask web backend and HTML/CSS/jQuery frontend for management and data visualization. Data visualization was done using D3.js and SVG. Some components were developed using React.js
- Designed and developed several React based demonstrations for visualizing sensor data collected using an in house IoT platform.
- Was involved in developing NFC support for Qt on Android with main focus on developing Java classes needed for communication between native C++ code and Android system. The work was later merged to Qt mainline by Basyskom.

Technologies used: Python, C++, JavaScript, Django, Java, Qt, React

Co Founder / Freelancer

Nov 2013 - Present

Mediaholvi Cooperative

- Worked in a team developing a 3D interior design and planning software for web using Unity3D. Main tasks included designing user interface and workflow for house/apartment design phase and developing algorithms for creating 3D data from 2D designs.
- Developed a Django + HTML/CSS/jQuery web-application used by fire departments for fleet management. The application involved integrations to embedded hardware which was used to notify employees and gather data.

Technologies used: Unity, HTML/CSS, JavaScript, Django, C#

Student

May 2010 - Sep 2010

Google Summer of Code

- Designed and implemented a eBook reader (MeBook) application for Nokia N900 phones as part of Google Summer of Code 2010. The application was developed using Qt and C++ and its features included epub support, automatic pagination and downloading from online libraries. Worked closely with the Maemo community to ensure the application matched the needs of the community.

Technologies used: C++, Qt

PERSONAL PROJECTS AND OPEN SOURCE

- I have a technical blog at <https://juhanajauhiainen.com/posts/> where I write about software development and technologies. Some of my articles include [What are template literal types in TypeScript?](#), [Memoization in Python](#) and [Basics of React server side rendering with Express.js](#)
- I maintain two npm packages which implement OAuth2 authentication strategy for Remix applications [remix-auth-microsoft](#) and [remix-auth-notion](#)
- I have contributed to multiple open source projects in the React ecosystem ([next-firebase-auth](#) (bug fixes, features), [TanStack Table](#) (docs, examples), [Remix](#) (docs, examples))
- I've created a template site called [templates.tw](#) where I create web component and page templates using Tailwind CSS.
